

3-D HANGING STAR

You'll need: Scissors, markers, glue stick, 10" string

1. Turn the paper over. You should be able to see the outline of each star. Color each star solid or with a pattern or design.
2. Turn the paper to the front and cut out all 5 stars.
3. Fold each star in half on the dotted line. (Fold so the design is on the inside.)
4. Fold the string in half. Tie a knot. Tape it to the dotted line on one of the stars. (The knot should be at the bottom of the star.)
5. Glue the back half of one star. Line it up with the back half of another star. Repeat this process until you have glued all of the stars together to make a 3-dimensional star.
